SAMPLE INDIRECT RATE PROPOSAL

TABLE OF CONTENTS

- A. Introduction
- B. DCAA model for Indirect Rates
- C. Indirect Rate Proposal- Single Rate Method
- D. Indirect Rate Proposal – Two Rate Method (Fringe and Indirect Rate)
- E. Definitions and References

A. Introduction

There are several methods for allocating indirect costs/expenses to projects, activities and programs. For applicants who have prior experience in developing Indirect Rates, **Paragraph B** identifies the most comprehensive tool. The instructions in **Paragraphs C and D** below are provided as a **sample** for recipients who have little or no experience in developing indirect rates but intend to request reimbursement for indirect costs as part of a Federal Financial Assistance Award. Select one method from Paragraph A, B or C. The resulting Indirect Rates are needed on two occasions:

1. **Initially, indirect rates will be required for estimating the Budget** for a current or pending award if indirect costs are requested for reimbursement.
2. **After the award** is made, the applicant will provide indirect rates on an annual basis to the Specialist at the awarding office to **reconcile billed costs to actual costs** per the award terms and conditions.

Paragraph E below contains terms and references that may be unfamiliar to a new applicant but that are essential in understanding how to develop an Indirect Rate.

B. Indirect Rate Proposal — DCAA “ICE” model

For applicants who have prior experience in calculating Indirect Rates, the most comprehensive instructions with sample schedules/spreadsheets is the Defense Contract Audit Agency’s (DCAA) Incurred Cost Electronic (ICE) model. The model can be located on the DCAA website at <http://www.dcaa.mil/> under **DCAA Publications, ICE Model**. Although the ICE model is intended as a sample for accumulating Annual Incurred Costs it can also be used as a model in forecasting indirect rates.

C. Indirect Rate Proposal—Single Rate Method --Example

The following is a sample INDIRECT RATE PROPOSAL using the Single Rate Method. The Indirect Rate Calculation and Step by Step instructions are shown below the General Ledger table. Each Step has a narrative explanation provided on page 3.

GENERAL LEDGER

ACCT #	ACCOUNT NAME	ANNUAL TOTAL	DIRECT	INDIRECT	UNALLOW	INDIRECT-CLAIMED
6110	Salaries & Wages	\$656,824	\$656,824			
8110	Salaries & Wages	\$123,067		\$123,067		\$123,067
8210	Holiday	\$22,502		\$22,502		\$22,502
8211	Vacation	\$31,252		\$31,252		\$31,252
8212	Sick Leave	\$15,318		\$15,318		\$15,318
8213	Severance Pay	\$32,419		\$32,419		\$32,419
8214	FICA-Employer portion	\$27,427		\$27,427		\$27,427
8215	Federal Unemployment Insurance	\$1,393		\$1,393		\$1,393
8216	State Unemployment Insurance	\$6,722		\$6,722		\$6,722
8217	Workers' Compensation	\$3,826		\$3,826		\$3,826
8218	Health Insurance	\$40,009		\$40,009		\$40,009
8219	Life Insurance	\$7,920		\$7,920		\$7,920
8220	Pension Plan	\$60,638		\$60,638		\$60,638
8221	Recruitment	\$285		\$285		\$285
8222	Relocation	\$1,216		\$1,216		\$1,216
8223	Personal Absence	\$1,082		\$1,082		\$1,082
6310	Travel	\$35,173	\$35,173			
8310	Travel	\$12,987		\$12,987	\$2,500	\$10,487
6320	Material	\$843,192	\$843,192			
6330	Other Direct Cost	\$187,493	\$187,493			
6340	Subcontracts-contractual	\$944,841	\$944,841			
6350	Supplies	\$25,000	\$25,000			
8350	Supplies	\$15,014		\$15,014		\$15,014
6360	Equipment Rental	\$15,000	\$15,000			
8360	Equipment Rental	\$12,150		\$12,150		\$12,150
8410	Legal Fees	\$1,744		\$1,744		\$1,744
8420	Audit Fees	\$32,361		\$32,361		\$32,361
8430	Miscellaneous	\$3,969		\$3,969		\$3,969
8503	Entertainment	\$484		\$484	\$484	\$0
8505	Advertising & Promotion	\$354		\$354		\$354
8520	Periodicals	\$6,435		\$6,435		\$6,435
8522	Bad Debts	\$3,018		\$3,018	\$3,018	\$0
8523	Business Meals	\$2,702		\$2,702		\$2,702
8524	Depreciation/Amortization	\$2,824		\$2,824		\$2,824
8525	Dues/Memberships	\$2,112		\$2,112		\$2,112
8526	Conventions/Seminars	\$7,936		\$7,936	\$2,000	\$5,936
8527	Interest Expense	\$1,001		\$1,001	\$1,001	\$0
8531	Insurance	\$738		\$738		\$738
8535	Repairs/Maintenance	\$1,681		\$1,681		\$1,681
8537	Telecopier	\$2,434		\$2,434		\$2,434
8538	Telephone	\$45,552		\$45,552		\$45,552
8539	Temp Help/contract labor	\$1,816		\$1,816		\$1,816
8540	Small Equipment	\$878		\$878		\$878
8542	Postage & Handling	\$6,235		\$6,235		\$6,235
8553	Office Supplies	\$6,461		\$6,461		\$6,461
8554	Other Outside Services	\$30,281		\$30,281		\$30,281
TOTAL			\$2,707,523	\$576,243	\$9,003	\$567,240
			Base-Direct Labor			Pool
INDIRECT COST POOL		\$567,240				
BASE= (DIRECT LABOR)		\$656,824				
INDIRECT RATE		86.4%				

STEPS IN SINGLE RATE PROCESS

1. Develop List of Accounts (GL)
2. Segregate Direct Costs from Indirect Costs
3. Segregate Unallowable Costs
4. Consider Adjustments to Historical Costs
5. Sum the Indirect Cost Pool
6. Identify the Indirect Base
7. Calculate the Indirect Rate

C. Indirect Rate Proposal—Single Rate Method—Written Narrative

The following is a written narrative to explain the Steps identified in the Single Rate Method Example on Page 2. The simplified method for allocating indirect costs is the Single Rate Method. This is usually applicable to a small business with less than \$10M or less than 25 employees. This method groups all allowable indirect costs, including fringe, into a single pool. The following is a step-by-step process of how to use the information from your General Ledger (GL) to develop an indirect rate.

1. Develop List of Accounts (General Ledger)

Start the process by compiling a list of all accounts in the GL, along with the Account Number, Account Name and the Dollars that equate to the most recent fiscal year of incurred costs/expenses. If the business is new and no costs/expenses have been incurred, then use your best judgment in estimating costs or budgeted amounts for the accounts in the General Ledger. **(A GL sample is included following step 8 below.** Please note that it is provided only as a sample and therefore the recipient should use their own account names and numbers rather than those in the sample.)

2. Segregate Direct Costs from Indirect

The second step in the process is to determine which accounts/costs in the GL can be considered direct costs to a single project or indirect costs to two or more projects (see definitions in paragraph E). Evaluate each expense or account in the GL to determine if the account should be divided into separate direct and indirect accounts. For example, Salaries and Wages can be charged as a direct cost in some situations and as an indirect cost in other situations. Therefore, Salaries and Wages would be separated into two distinct account numbers in the GL to separate direct salaries from indirect salaries (as shown in the example GL following Step 8 below). Other similar costs/expenses that may be identified as sometimes direct and sometimes indirect are travel, supplies, equipment and subcontracts. Costs that are identified as direct in the GL must track in corresponding subsidiary ledgers with unique account numbers to each project or job. For example, direct salaries/labor can be accumulated into one direct account number in the GL, but in the subsidiary ledgers the direct salaries must be identified to individual projects using unique account numbers. To be considered compliant, the government requires a job order cost accounting system.

3. Segregate Unallowable Costs

Once the costs in the GL are separated into direct and indirect accounts, you must identify any cost that may be considered unallowable for Federal awards and remove them from the total indirect cost pool. Unallowable costs are identified in the Cost Principles for each type of organization (see Reference Information in paragraph E). It is essential to read the appropriate Cost Principles to identify the types of costs that are considered unallowable. In some situations costs might be considered allowable where the same type of costs can be considered unallowable in other circumstances. The sample GL following Step 8 below identifies some unallowable costs. The sample is not a complete list.

4. Consider Adjustments to Historical Expenses

As explained in the Introduction there are two situations for which the recipient will be preparing an Indirect Rate Proposal. Item 2 in the Introduction was for when you have an existing Award and you must annually submit a fiscal year Indirect Rate Proposal as required by the terms and conditions of an existing Award. In that situation, the historical expenses accumulated in Step 1

must be those that are used to develop the Indirect Rate in Step 7. However, if the recipient is preparing an Indirect Rate Proposal for a pending/current Award then the recipient needs to consider the impact the pending Award will have on their financial status (General Ledger). In some cases the historical costs accumulated as part of Step 1 may need to be adjusted to better reflect the financial situation for the pending Award. As an example, if all expenses in the General Ledger will increase in the same proportion there would be no impact on the resulting Indirect Rate result calculation in Step 7. However if direct labor goes up significantly but other indirect expenses do not increase in proportion the result would be a decrease to the Indirect Rate calculated in Step 7. Therefore the recipient preparing the Indirect Rate Proposal should perform a cursory review of the nature and magnitude of the accumulated historical expenses and make appropriate adjustments to ensure that the resulting Indirect Rate is the best representation of your business during the period of performance of the current Award. If historical costs are adjusted to accommodate better business judgment then please provide the original historical costs, the adjusted costs and a written descriptive summary of the business assumptions used in determining the adjusted costs when submitting the Indirect Rate Proposal.

5. Sum the total of the Indirect Cost Pool (numerator)

Add the total of all allowable indirect costs that are segregated in step 3 above. This will be the “pool” or top number (numerator) when dividing to compute the indirect rate. Please ensure that there are no unallowable costs included.

6. Select the Base –federal and non-federal (denominator)

The base used to allocate the indirect costs is usually Total Direct Labor or Total Direct Costs of all projects/programs/activities. In the attached example, Total Direct Labor Costs is used as a base. Therefore, simply identify the direct labor costs (both federal and non-federal projects) that are segregated in step 2 above. This will be the “base” of allocation or the bottom number (denominator) for calculating the indirect rate. Normally there are no unallowable direct costs but please note that if there are any they need to be left in the total base costs so that the indirect costs are allocated equitably.

7. Calculate the Indirect Rate (Pool/Base)

Divide the Pool amount in step 5 by the base amount in Step 6. This will be the Indirect Rate as a percentage of the base selected. Indirect Costs are identified in the Budget (form SF-424a) in block 6j.

D. Indirect Rate Proposal—Two Rate Method (Fringe Rate and Indirect Rate)--Example

The following is a sample INDIRECT RATE PROPOSAL using the two rate method- Sample rate calculations are included below the General Ledger with a Step by Step process. A written narrative of each step is provided on Page 6 following the example.

GENERAL LEDGER

ACCOUNT #	ACCOUNT NAME	ANNUAL TOTAL	DIRECT	Fringe	INDIRECT	UNALLOWABLE	INDIRECT-CLAIMED
8210	Holiday	\$22,502		\$22,502			
8211	Vacation	\$31,252		\$31,252			
8212	Sick Leave	\$15,318		\$15,318			
8213	Severance Pay	\$32,419		\$32,419			
8214	FICA-Employer portion	\$27,427		\$27,427			
8215	Federal Unemployment Insurance	\$1,393		\$1,393			
8216	State Unemployment Insurance	\$6,722		\$6,722			
8217	Workers' Compensation	\$3,826		\$3,826			
8218	Health Insurance	\$40,009		\$40,009			
8219	Life Insurance	\$7,920		\$7,920			
8220	Pension Plan	\$60,638		\$60,638			
TOTAL FRINGE POOL				\$249,426			
6110	Salaries & Wages	\$656,824	\$656,824				
8110	Salaries & Wages	\$123,067			\$123,067		\$123,067
FRINGE ALLOCATED TO DIRECT & INDIRECT LABOR			\$210,184	32%	\$39,381		\$39,381
8221	Recruitment	\$285			\$285		\$285
8222	Relocation	\$1,216			\$1,216		\$1,216
8223	Personal Absence	\$1,082			\$1,082		\$1,082
6310	Travel	\$35,173	\$35,173				
8310	Travel	\$12,987			\$12,987	\$2,500	\$10,487
6320	Material	\$843,192	\$843,192				
6330	Other Direct Cost	\$187,493	\$187,493				
6340	Subcontracts-contractual	\$944,841	\$944,841				
6350	Supplies	\$25,000	\$25,000				
8350	Supplies	\$15,014			\$15,014		\$15,014
6360	Equipment Rental	\$15,000	\$15,000				
8360	Equipment Rental	\$12,150			\$12,150		\$12,150
8410	Legal Fees	\$1,744			\$1,744		\$1,744
8420	Audit Fees	\$32,361			\$32,361		\$32,361
8430	Miscellaneous	\$3,969			\$3,969		\$3,969
8503	Entertainment	\$484			\$484	\$484	\$0
8505	Advertising & Promotion	\$354			\$354		\$354
8520	Periodicals	\$6,435			\$6,435		\$6,435
8522	Bad Debts	\$3,018			\$3,018	\$3,018	\$0
8523	Business Meals	\$2,702			\$2,702		\$2,702
8524	Depreciation/Amortization	\$2,824			\$2,824		\$2,824
8525	Dues/Memberships	\$2,112			\$2,112		\$2,112
8526	Conventions/Seminars	\$7,936			\$7,936	\$2,000	\$5,936
8527	Interest Expense	\$1,001			\$1,001	\$1,001	\$0
8531	Insurance	\$738			\$738		\$738
8535	Repairs/Maintenance	\$1,681			\$1,681		\$1,681
8537	Telecopier	\$2,434			\$2,434		\$2,434
8538	Telephone	\$45,552			\$45,552		\$45,552
8539	Temp Help/contract labor	\$1,816			\$1,816		\$1,816
8540	Small Equipment	\$878			\$878		\$878
8542	Postage & Handling	\$6,235			\$6,235		\$6,235
8553	Office Supplies	\$6,461			\$6,461		\$6,461
8554	Other Outside Services	\$30,281			\$30,281		\$30,281
TOTAL INDIRECT COST POOL							
TOTALS			\$2,917,707		\$366,198	\$9,003	\$357,195
			(BASE)				(Pool)
FRINGE COST POOL		\$249,426					
BASE (DIRECT & INDIRECT LABOR)		\$779,891			\$357,195		
		FRINGE RATE	32.0%		INDIRECT RATE	12.2%	

STEPS IN THE TWO RATE METHOD

1. Develop List of Accounts (GL)
2. Segregate Direct Costs, Fringe Costs and Indirect Costs
3. Segregate Unallowable Costs
4. Consider Adjustments to Historical Costs
5. Identify Fringe Pool
6. Identify Fringe Base
7. Compute the Fringe Rate
8. Distribute Fringe Expense (direct and indirect)
9. Sum the Indirect Cost Pool
10. Identify the Indirect Cost Base
11. Calculate the Indirect Rate

D. Indirect Rate Proposal—Two Rate Method (Written Narrative)

The following is a written narrative to explain the Steps identified in the Example on page 5. Paragraph C discussed the **simplified** method for calculating an indirect rate but the **more common** approach is to develop two indirect rates, one for Fringe and a separate Indirect Rate. The only difference from Paragraph C is that the costs are separated into three categories instead of two. The two mentioned in Paragraph C were Direct and Indirect Costs. In the two-rate method the Fringe Costs are separated out of the other indirect costs in the General Ledger (GL) to create a Fringe Pool of their own.

1. Same as Step 1 in paragraph C.

2. Segregate Direct Costs from Fringe and Indirect Costs

The second step in the process is to determine which accounts/costs in the GL into three categories, direct costs, fringe costs or indirect costs. First, separate out what would be considered employee benefits or fringe costs and then use the same scenario described in paragraph C-2 above to determine direct and indirect costs after the fringe is separated.

3. Same as Step 3 in Paragraph C.

4. Same as Step 4 in Paragraph C.

5. Identify the Fringe Pool (numerator)

As described in step 2, the GL cost elements must be separated into three cost groupings/pools. As seen in the sample GL below, the first grouping of costs could be the Fringe pool which will include the expenses incurred by the business for the employees such as FUTA, SUTA, employer share of social security taxes, health insurance/medical, etc. Add the total of these costs to determine the Fringe Pool.

6. Identify the Fringe Base (denominator)

The base for allocating Fringe will be the total of direct and indirect Salary and Wages.

7. Compute the Fringe Rate

Divide the total from Step 5 by the total from Step 6. This will be the Fringe Rate which will be applied to both direct and indirect salaries and wages (total labor costs).

8. Distribute the Fringe Expense to Direct and Indirect Columns

The fringe rate calculated in Step 7 can now be used to distribute or allocate the fringe expense to the Direct and Indirect Expense Columns. Use the calculated Fringe Rate in Step 7 and multiply times the amount of total Direct Labor dollars. Manually enter the amount in the Direct Expense column of the General Ledger. This fringe amount will now be considered part of the Total Direct Costs. In preparing a Budget (SF-424a) the computed Fringe Rate will be multiplied times the amount of Direct Labor in Block 6a and the amount entered in Block 6b. Similarly, multiply the Fringe Rate computed in Step 7 by the Indirect Labor dollars. Manually enter the amount in the Indirect Expense column in the General Ledger. The Fringe in the Indirect Expense column will now become part of the “indirect pool” described in Step 9.

9. Sum the Indirect Pool (numerator)

Add the total of all allowable indirect costs that are segregated in step 3 above. This will be the “pool” or top number (numerator) when dividing to compute the indirect rate. Please ensure that there are no unallowable costs included or any costs in the Indirect Cost Pool that are also claimed

in the base in Step 5. Also note that the Indirect Pool includes the fringe computed on indirect labor in Step 8.

10. Identify the indirect cost base (denominator)

The base or denominator for computing the indirect rate is commonly Direct Labor which was used in this example. Total Direct Costs can also be used if appropriate.

11. Calculate the Indirect Rate (Pool/Base)

Calculate the Indirect Rate by dividing the amount from Step 9 by the selected base amount in Step 10. This will be the Indirect Rate that will be applied to either Direct Labor or Total Direct Costs when submitting a budget or cost proposal. In our example we would apply the Indirect Rate to only the Direct Labor in block 6a of SF-424a and enter the indirect charge amount in line 6j.

E. Definitions and References.

DIRECT COSTS- Direct Costs are those costs that can be identified and tracked to a single project, activity, function, program, job or contract. Examples of costs that are most easily tracked to a specific project are labor, equipment, subcontracting, supplies and other direct costs. For accounting purposes, the General Ledger would accumulate all direct costs into summary accounts such as Direct Labor, Direct Material, etc., but the subsidiary ledgers would have unique account identifiers to track the costs to the specific projects.

INDIRECT COSTS- Indirect costs are those costs or expenses that can not be identified or tracked to a single activity, project, job, or contract or costs that apply to more than one project. Some examples of the types of cost that typically might be considered indirect are clerical labor, supervisor/management labor, utilities, phone expenses, fringe benefits, insurance, legal, and office rental or mortgage. These costs will be allocated or spread to more than 1 project.

ALLOCATE- Allocate means to set apart or assign. Direct costs are assigned or allocated to individual projects based on an equitable base such as direct labor. Indirect costs are set apart or allocated to two or more projects.

BASE (denominator)-Indirect costs are assigned or allocated to individual projects by using an Indirect Rate. The number that the rate or percentage will be applied to is the “base”. Therefore if an indirect rate is going to be applied to a project then the “base” has to be something that is directly identified to the project such as direct labor hours, direct labor dollars, material, supplies etc. One concern becomes in how to know what “base” to use when computing an indirect rate. To make that determination, two things should be considered. First, who or what causes the indirect cost and secondly, who or what benefits from the indirect cost? For example the paying of salaries and wages causes a business to have to incur fringe costs so the most logical base to use for computing a fringe rate is salary and wages. Other indirect costs such as utilities are not caused by any single person or event but everything in the business benefits from paying the utilities so the base could be all direct labor costs or total direct costs since they all benefit.

INDIRECT COST POOL (numerator)- Indirect costs can not be identified to specific projects; so all the indirect costs are grouped or added together into an indirect cost pool. By combining the costs into one pool, the costs can be allocated to projects by computing an indirect rate after a base is selected. Examples of indirect costs that can be combined into one group are fringe costs that are grouped into a “fringe pool”.

INDIRECT RATE- An indirect rate is simply a mathematical calculation, expressed as a percentage, that results from dividing the allowable indirect cost pool dollars by the selected direct base dollars. When expressing an Indirect Rate it is always important to express both the percentage and the base to which it applies (e.g. 45% of TDC). Expressing that an Indirect rate as 45% doesn’t mean anything unless it’s also stated that it is applied to Total Direct Labor or Total Direct Costs.

UNALLOWABLE COSTS- Federal guidelines prohibit the federal government from reimbursing certain types of costs that are called unallowable. Allowable and unallowable costs are listed in the corresponding cost principles for each type of organization. The references below identify the cost principles that are applicable to specific types of organizations. Some costs are totally or “expressly” unallowable and some costs are unallowable in part because of the nature of why they were incurred.
